

**About the Scheme**

- Launched on December 30, 2006, **ICICI Prudential Balanced Advantage Fund** is an open ended dynamic asset allocation fund.
- The Scheme uses an in-house asset allocation model to maintain an effective equity investment level, endeavoured to be above 65%. However, the actual equity level may go below 65% after considering the derivative exposure.

**Current Investment Strategy**

**Equity:** The Scheme invests predominantly in equities and uses derivatives to hedge the downside risk of the portfolio.

- *Flexi-cap* – The scheme shall invest across market capitalisation. While the large cap stocks represent established enterprises selected from the top 100 stocks by market capitalization, the midcaps and smallcaps are growing business entities with long-term growth potential.
- *Asset allocation* – The Scheme uses an in-house model, based on a long-term historical mean Price to Book Value (P/BV), which aims to increase equity exposure when valuations are attractive and aims to reduce equity exposure when valuations are expensive.
- *Derivatives strategy* - The Scheme will use derivative instruments for the purpose of hedging or portfolio rebalancing or for any other stock and/or index strategies as allowed under the SEBI Regulations.

**Debt:** The Scheme also invests a portion of its assets in fixed income securities issued by the government, public sector undertakings, and private companies with an aim to generate accrual income and potential capital appreciation.

**Why ICICI Prudential Balanced Advantage Fund?**

- The Scheme is suitable for investors who are seeking to benefit out of market volatility while maintaining fair equity allocation levels based on market valuations.
- Investors who wish to participate in equity markets with relatively conservative approach can invest in this scheme.

**Investment Style**

**Investment Strategy**
